the doctor

much of the stress and strain of student
life remains hidden

why do students burnout, drop classes, do poorly, even drop out of college when others excel?

what is the impact of stress, mood, workload, sociability, sleep and mental health on academic performance?

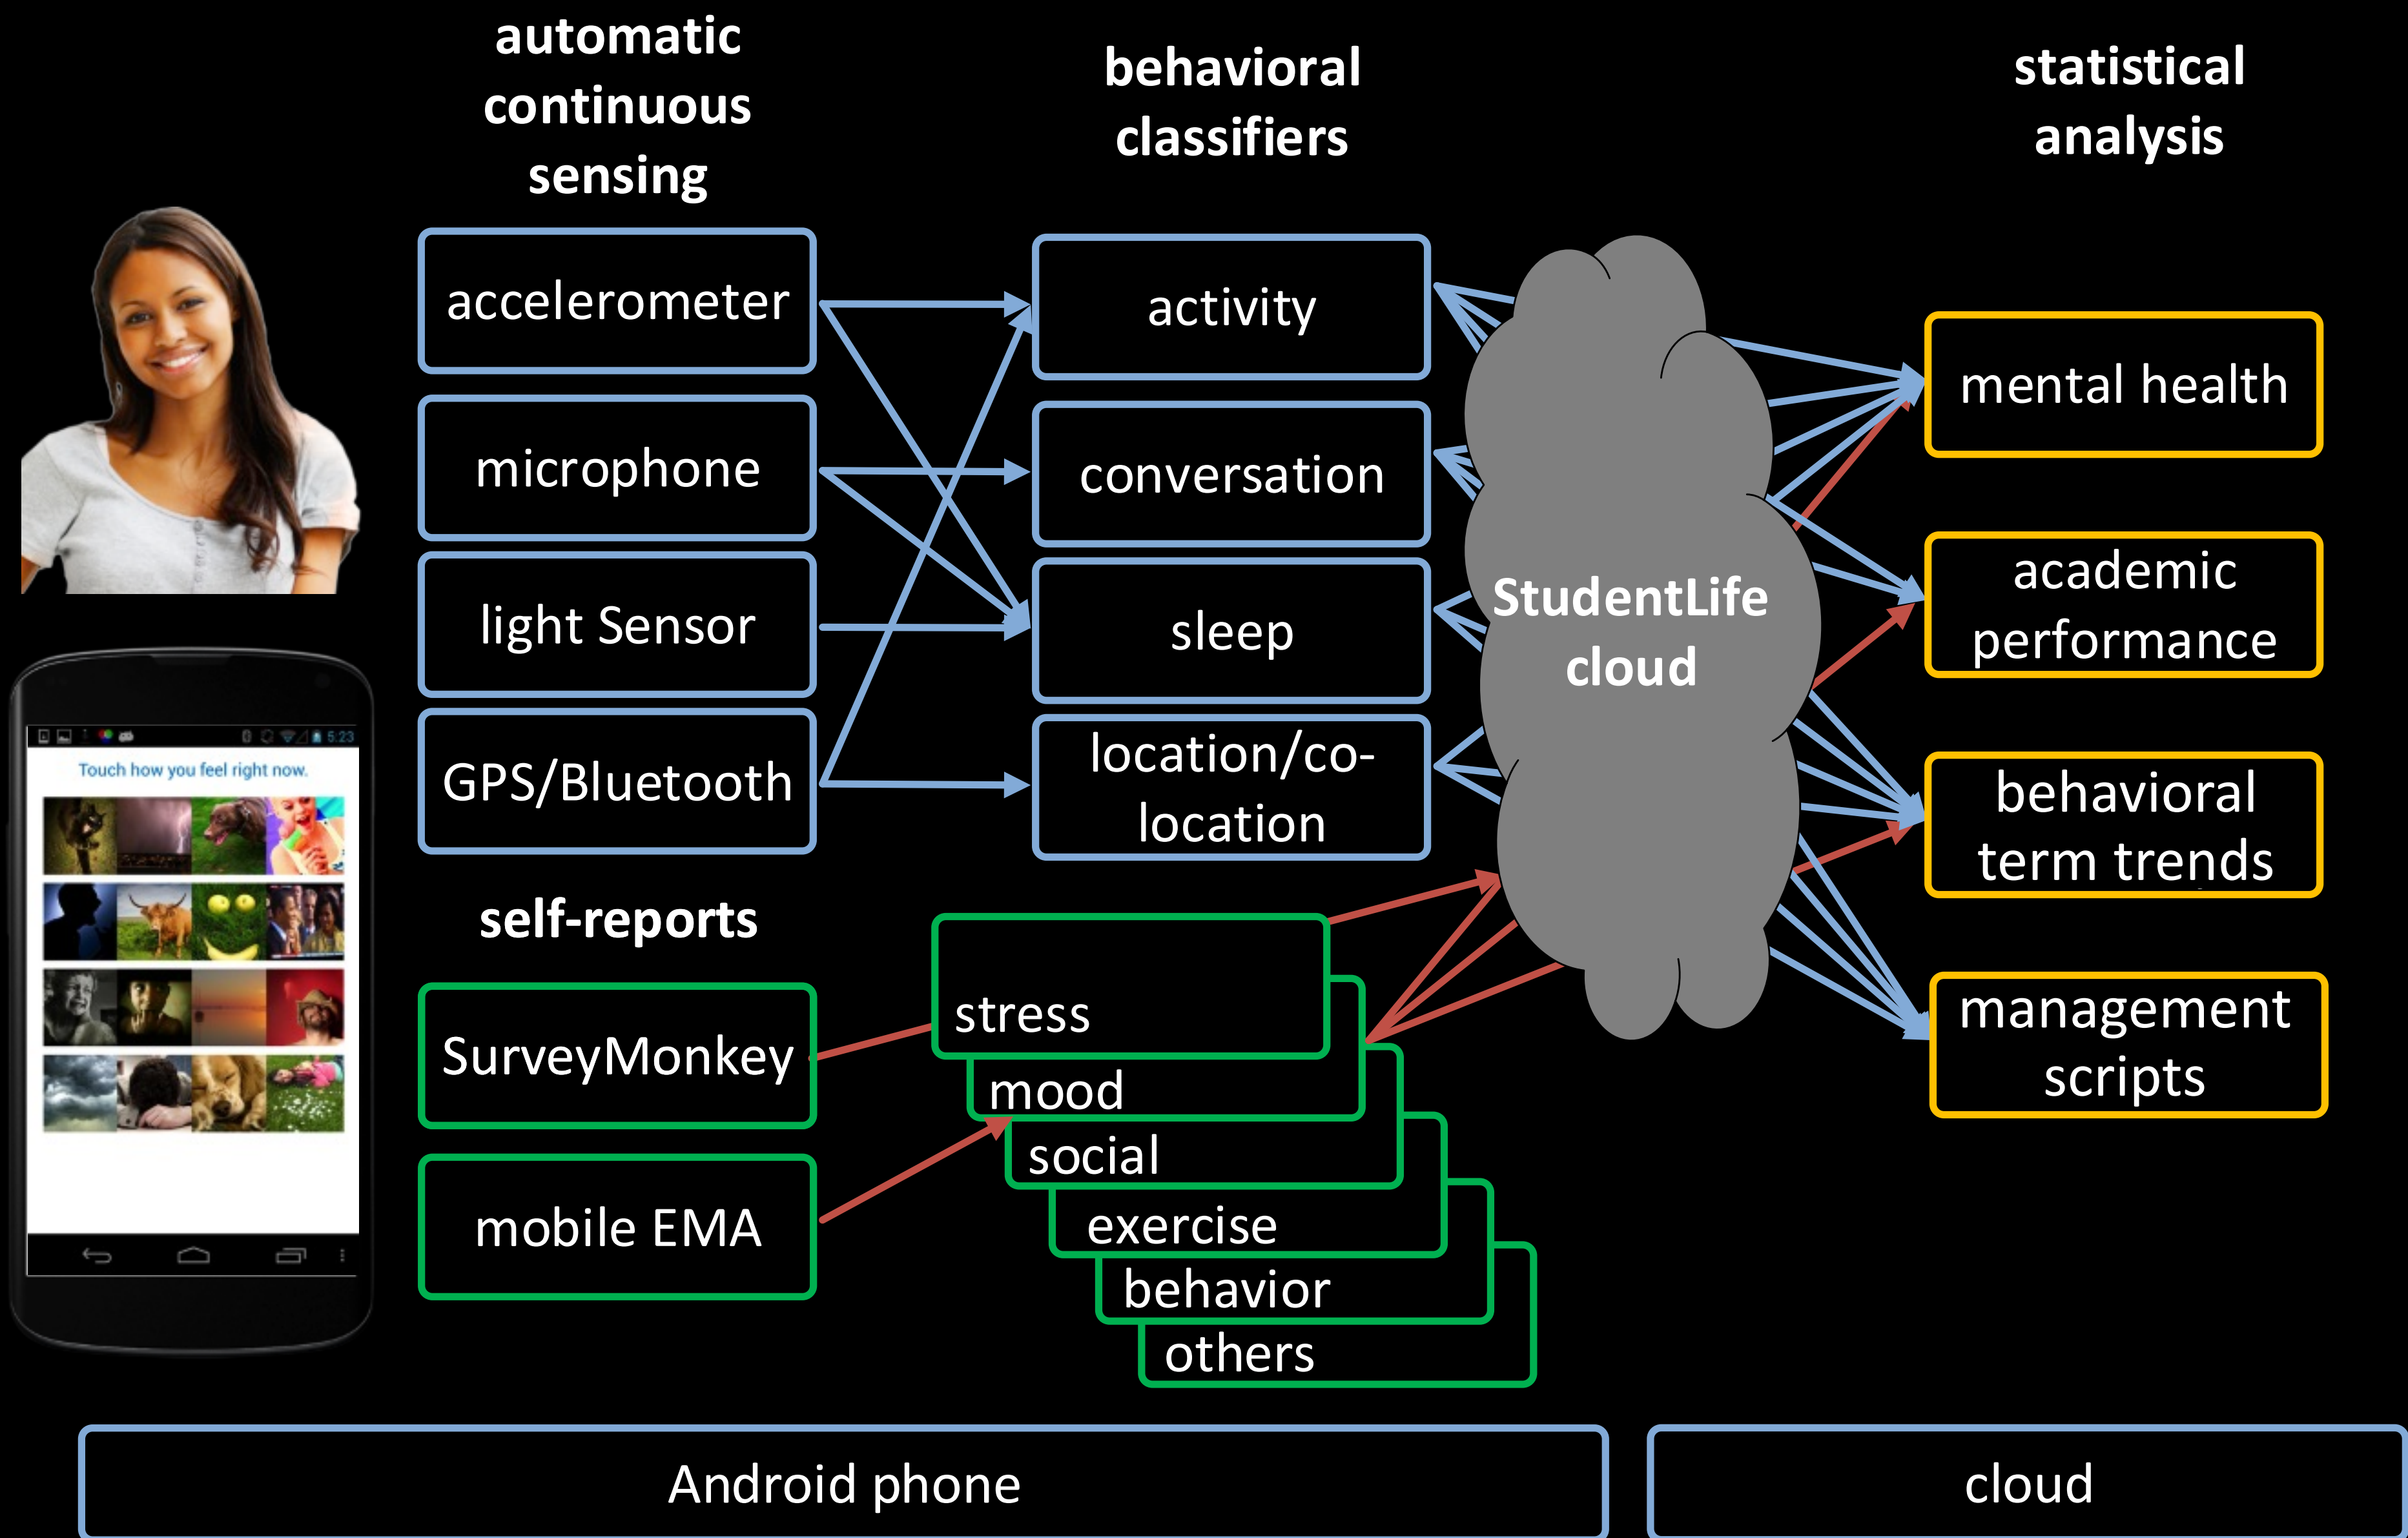

is there a set of behavioral trends or signature to the Dartmouth term

StudentLife study

48 students over 10 week Spring 2013 term

- 10 female, 38 male
- 30 undergraduates, 18 graduates
- 8 seniors, 14 juniors, 6 sophomores, 2 freshmen, 3 Ph.D students, 1 second-year Masters student, and 13 first-year Masters students
- 23 Caucasians, 23 Asians and 2 African-Americans.

PATIENT HEALTH QUESTIONNAIRE (PHQ-9)

NAME: _____ DATE: _____

Over the last 2 weeks, how often have you been bothered by any of the following problems?
(use "✓" to indicate your answer)

	Not at all	Several days	More than half the days	Nearly every day
1. Little interest or pleasure in doing things	0	1	2	3
2. Feeling down, depressed, or hopeless	0	1	2	3
3. Trouble falling or staying asleep, or sleeping too much	0	1	2	3
4. Feeling tired or having little energy	0	1	2	3
5. Poor appetite or overeating	0	1	2	3

6. Feeling bad about yourself—or that you are a failure or have let yourself or your family down	0
7. Trouble concentrating on things, such as reading the newspaper or watching television	0
8. Moving or speaking so slowly that other people could have noticed. Or the opposite — being so fidgety or restless that you have been moving around a lot more than usual	0
9. Thoughts that you would be better off dead, or of hurting yourself	0

depression severity	minimal	minor	moderate	moderately severe	severe
	1-4	5-9	10-14	15-19	20-27
number of students (pre-survey)	17	15	6	1	1
number of students (post-survey)	19	12	3	2	2

(Healthcare professional: For interpretation of TOTAL, TOTAL score, please refer to accompanying scoring card)

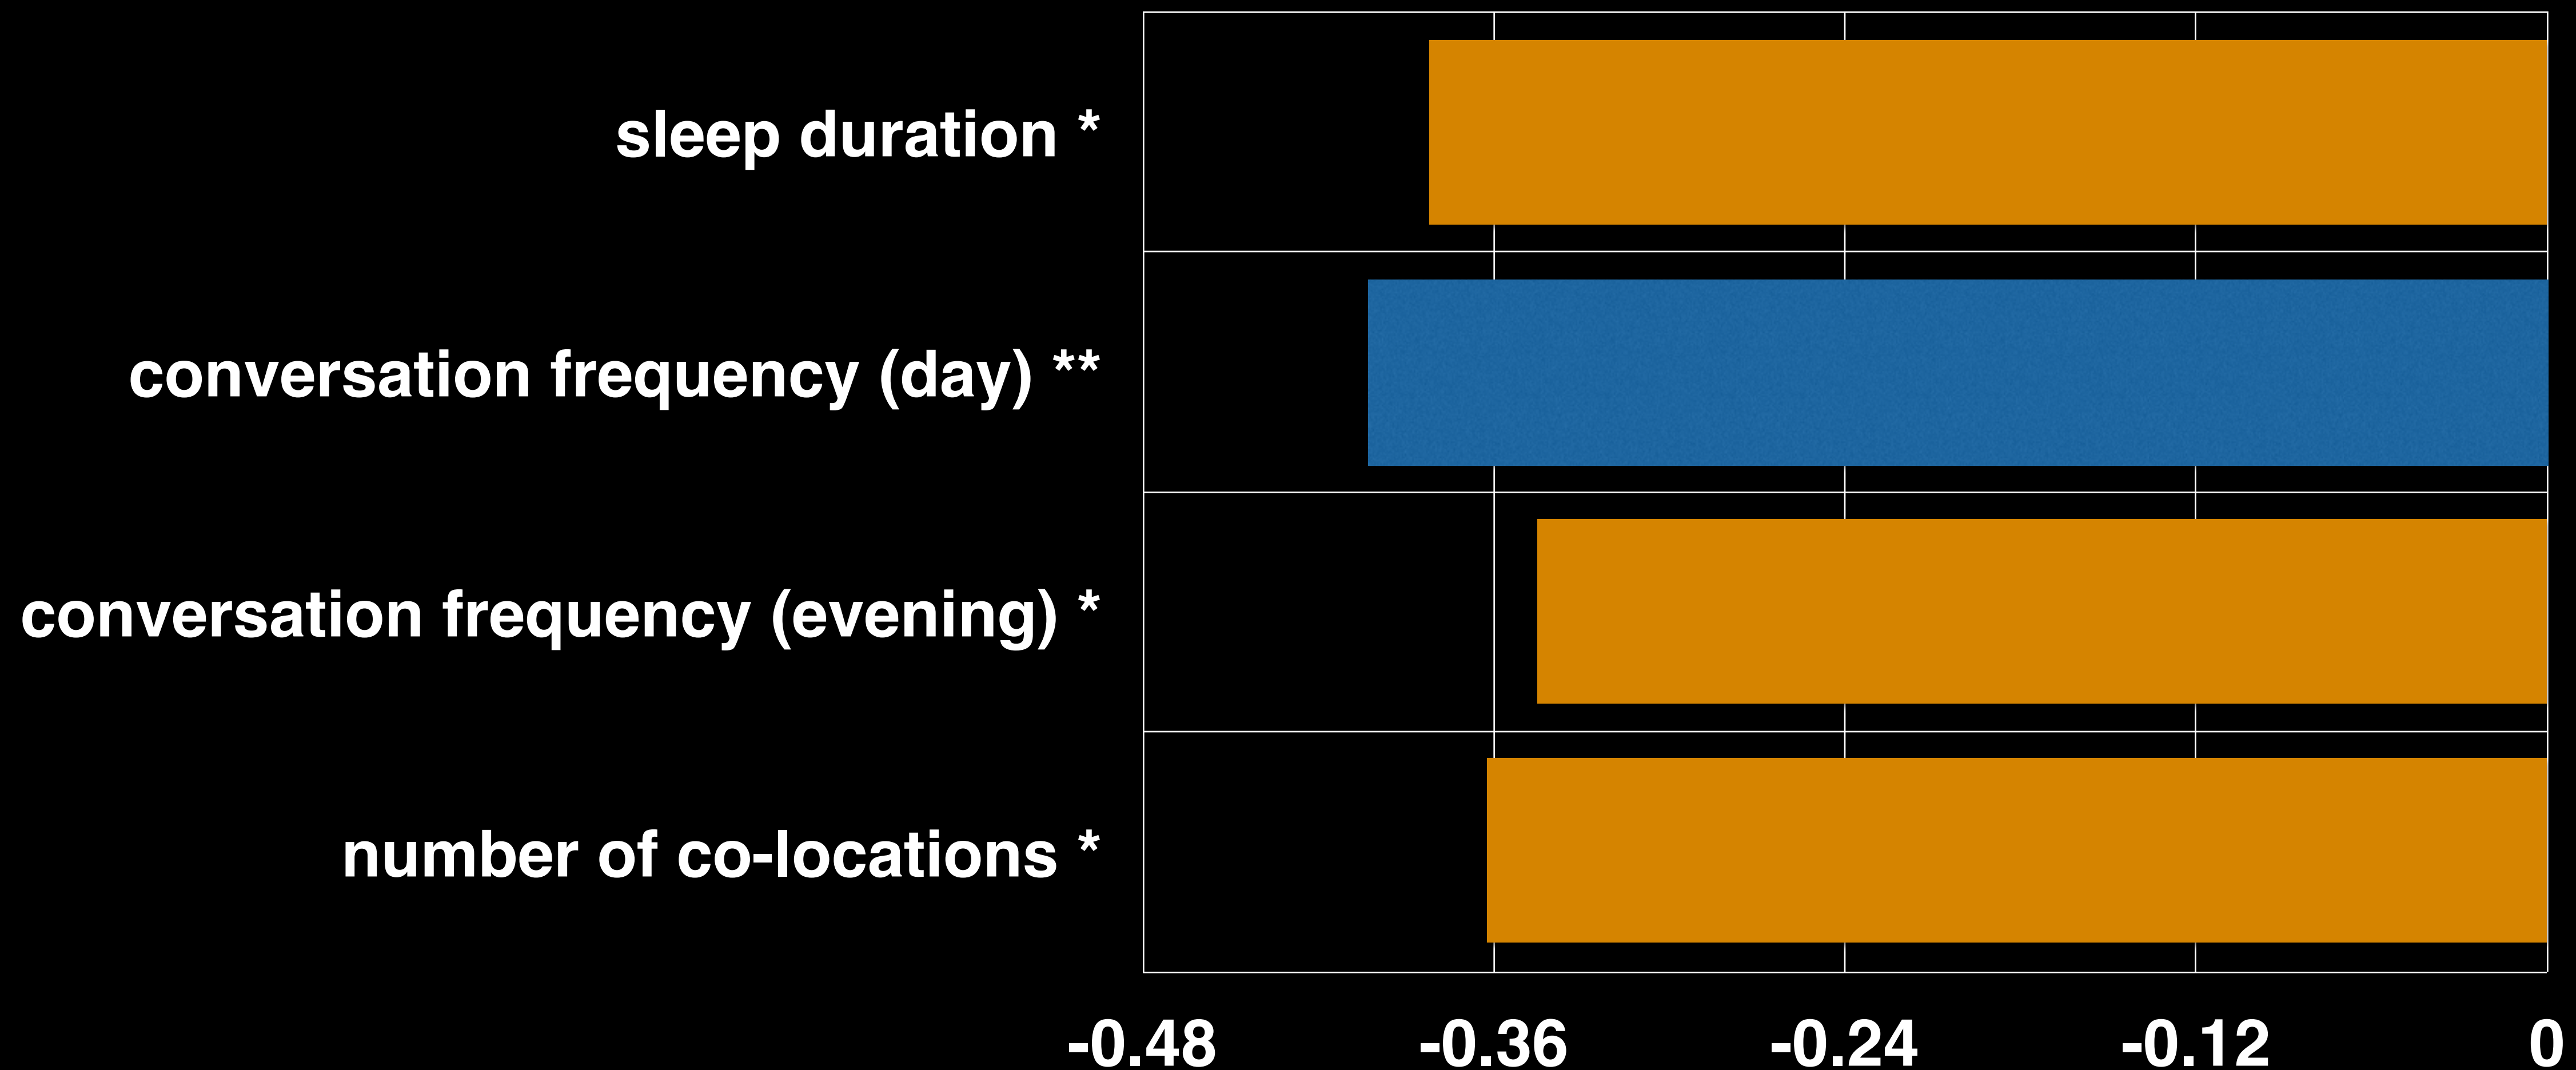

pre-post questionnaires

- depression scale
- perceived stress scale
- loneliness scale
- flourishing scale

mental health

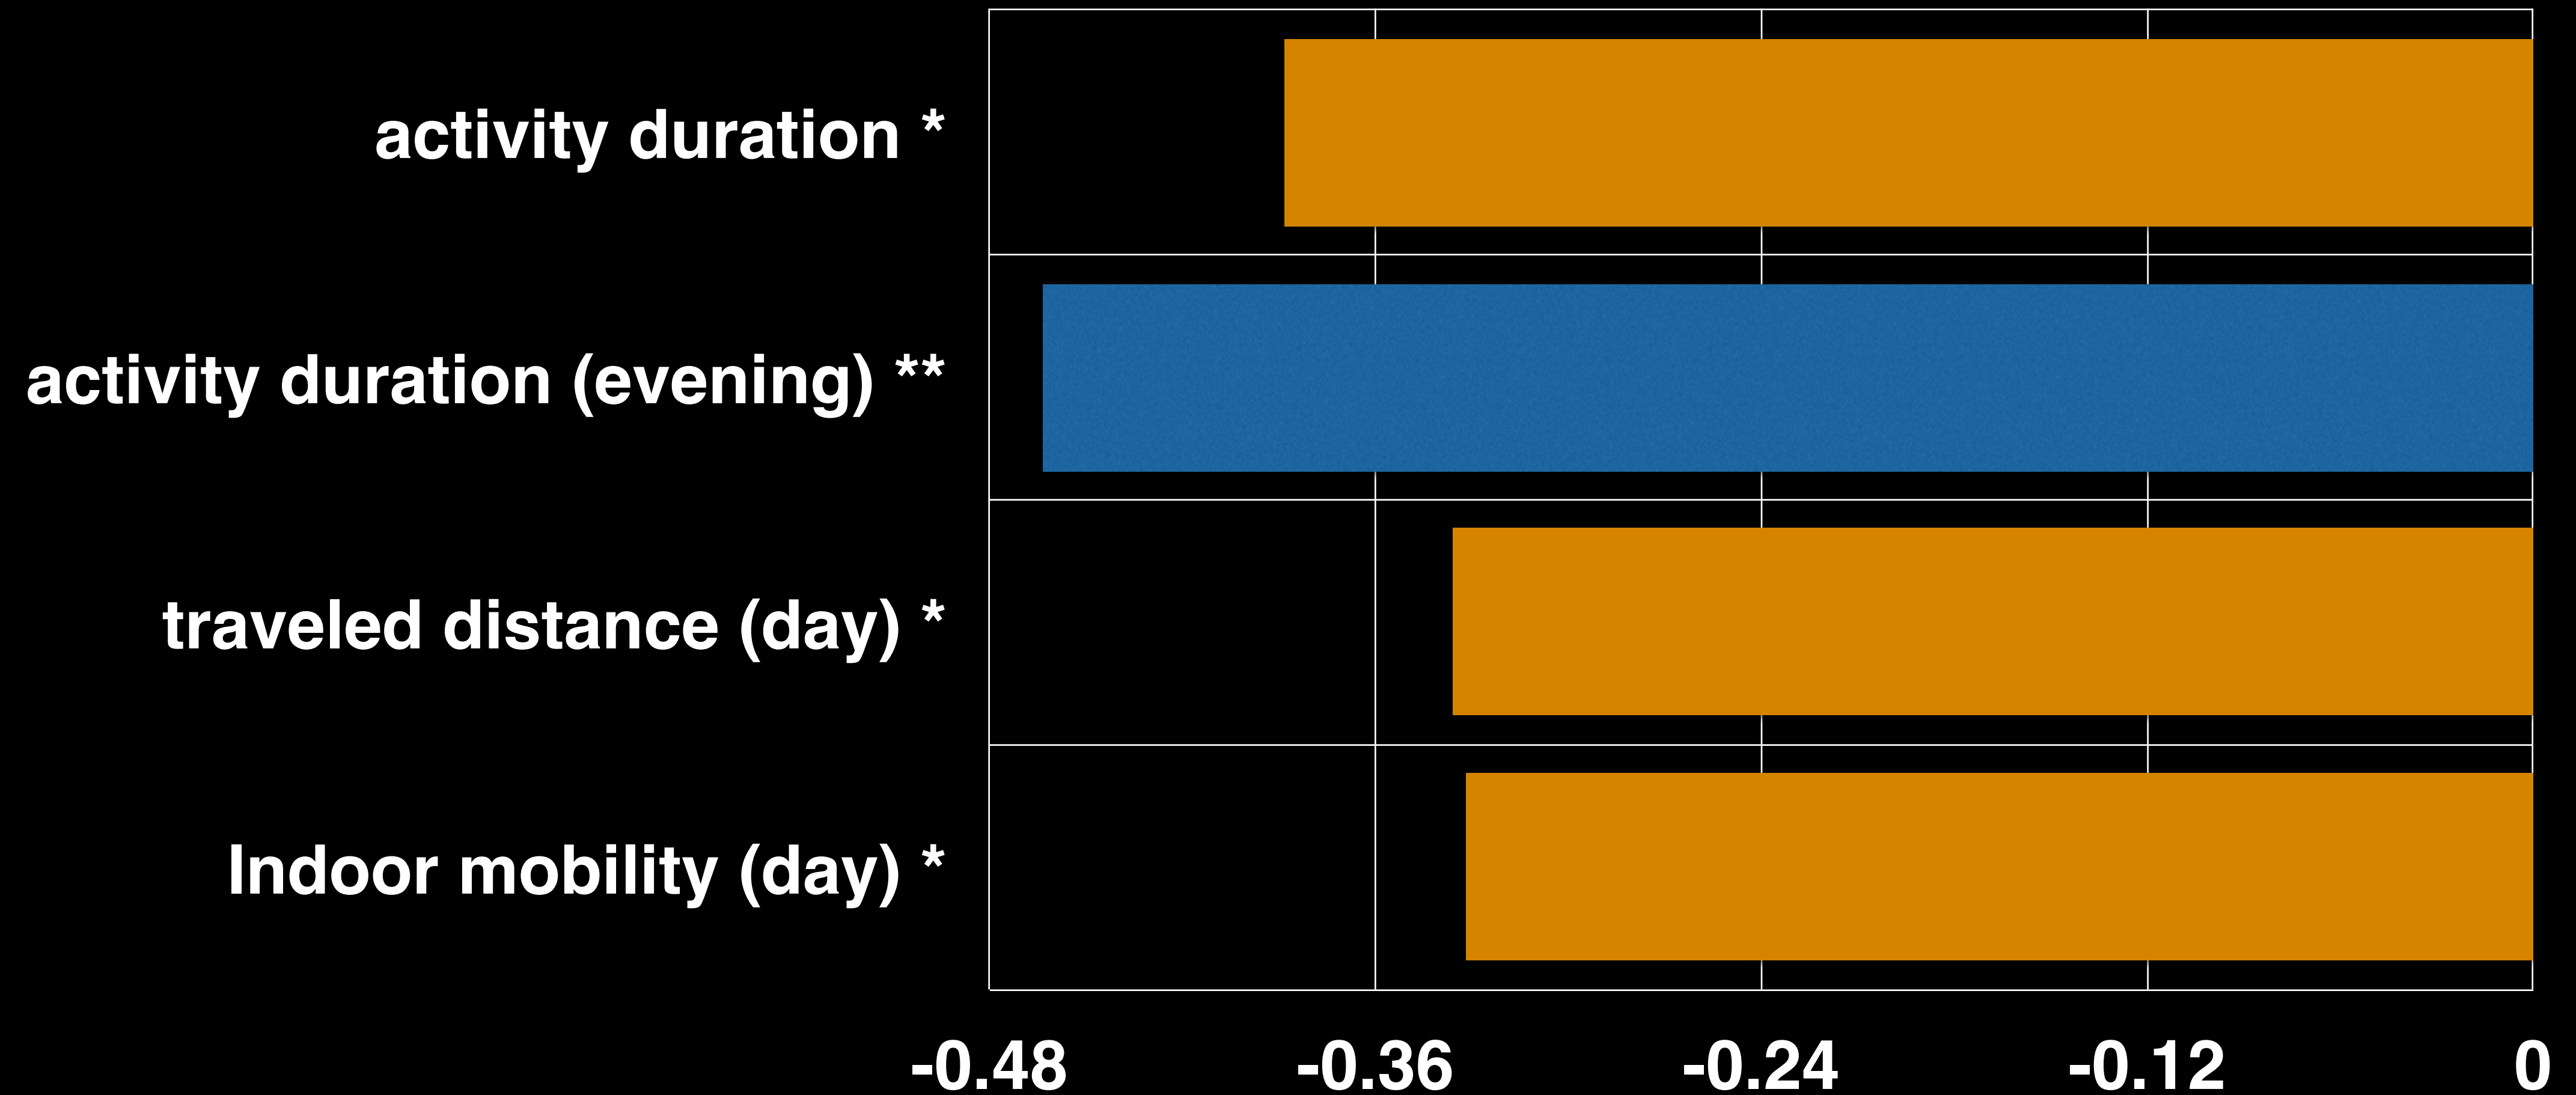

depression

* $p \leq 0.05$, ** $p \leq 0.01$

R value

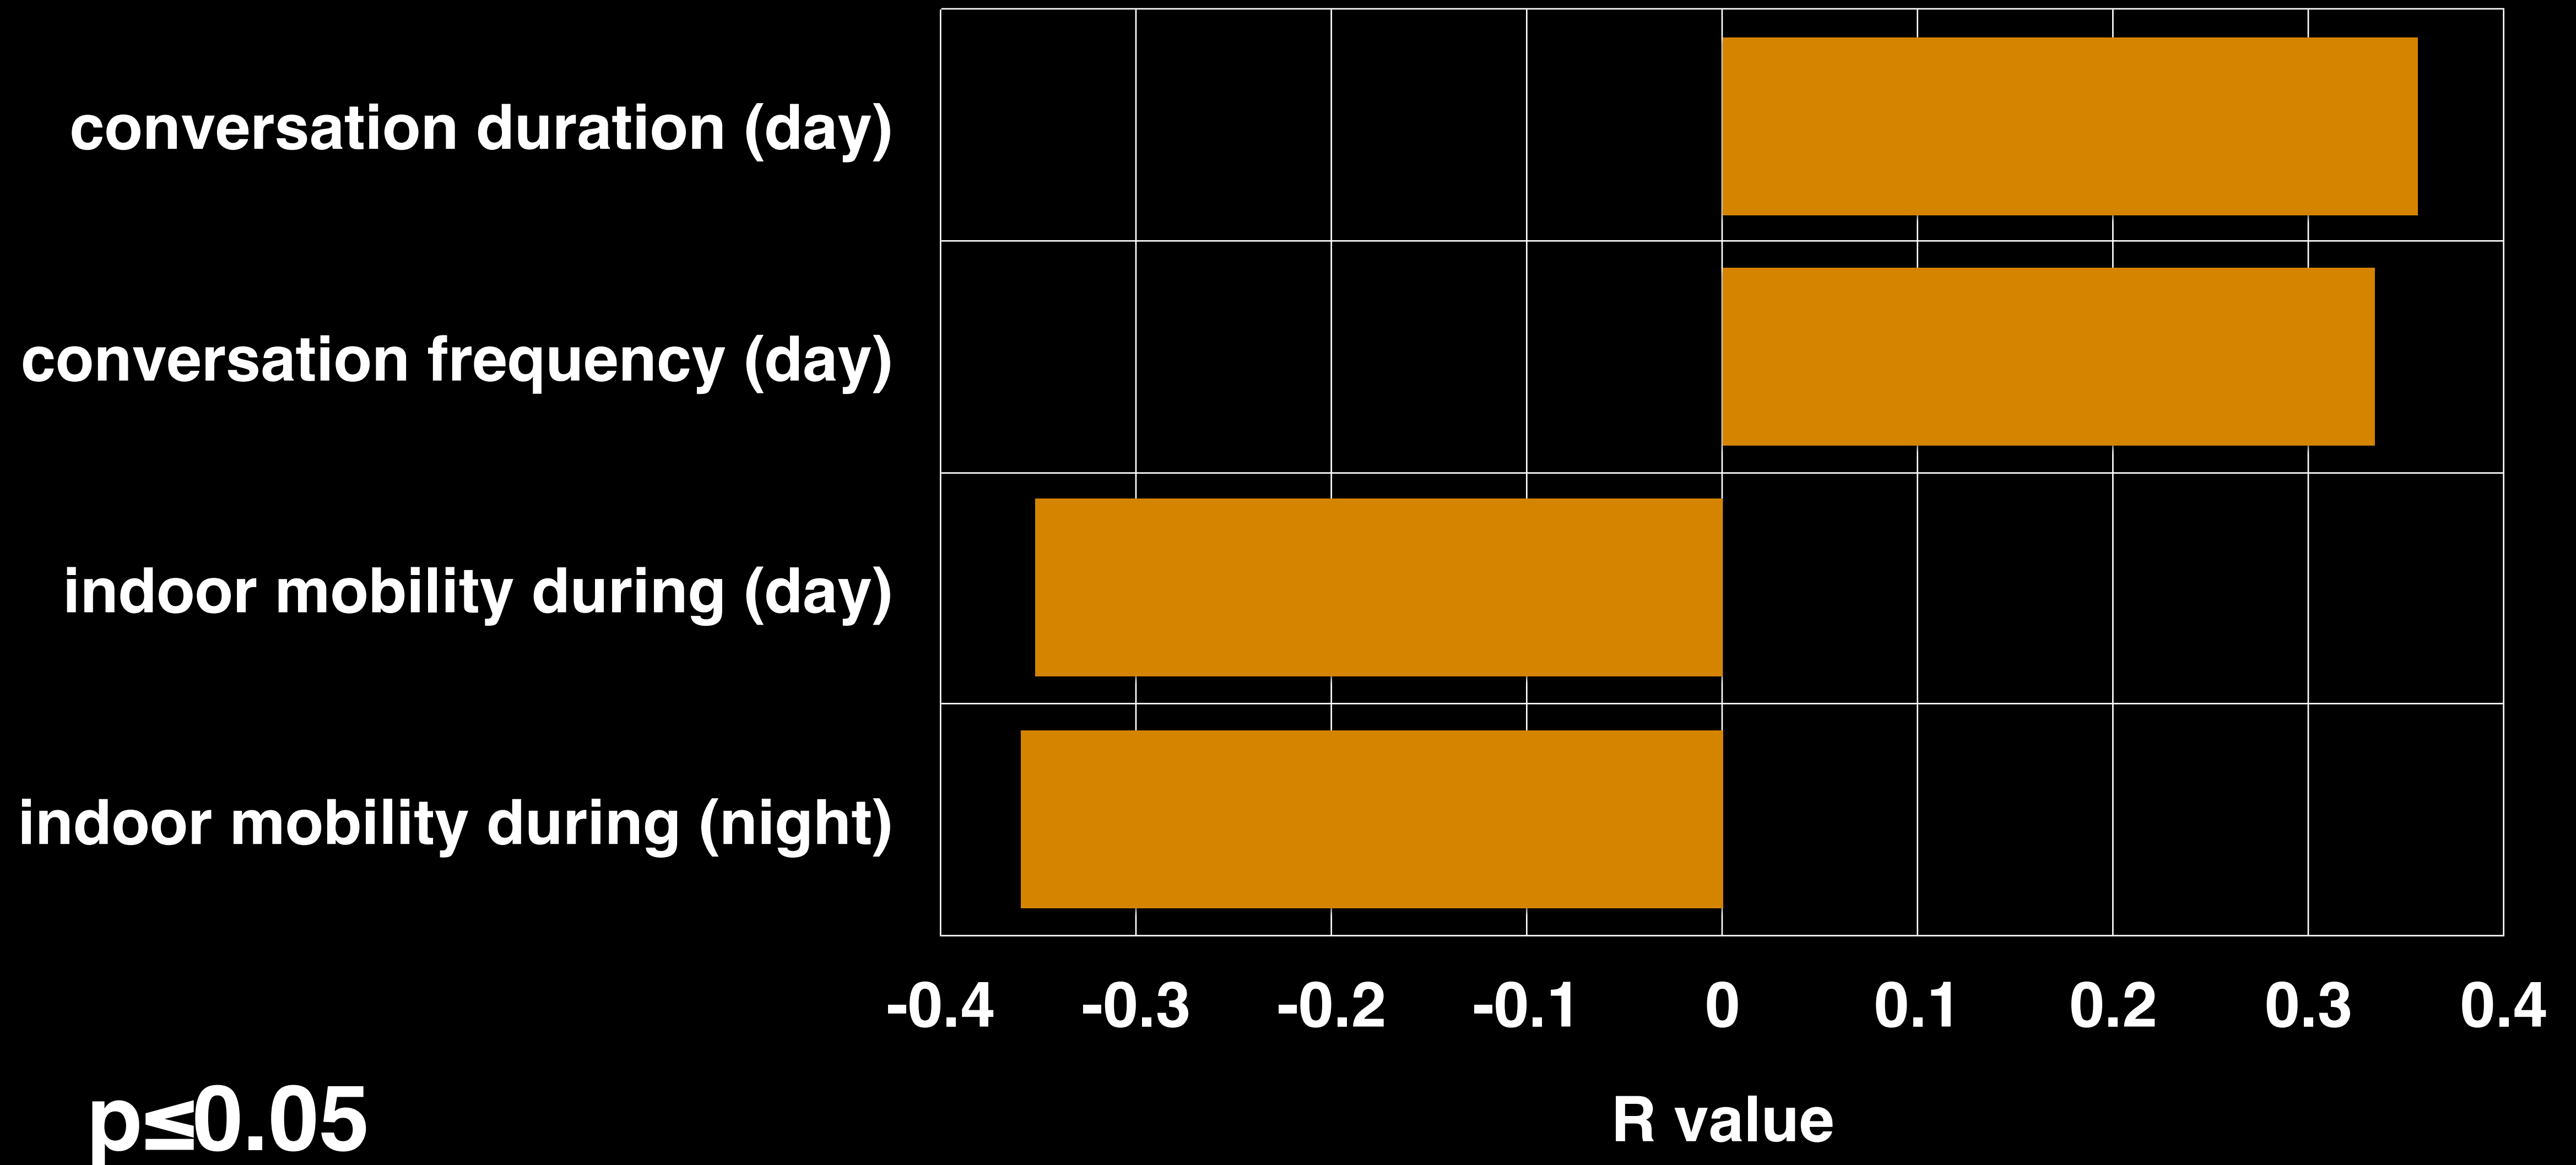

loneliness

* $p \leq 0.05$, ** $p \leq 0.01$

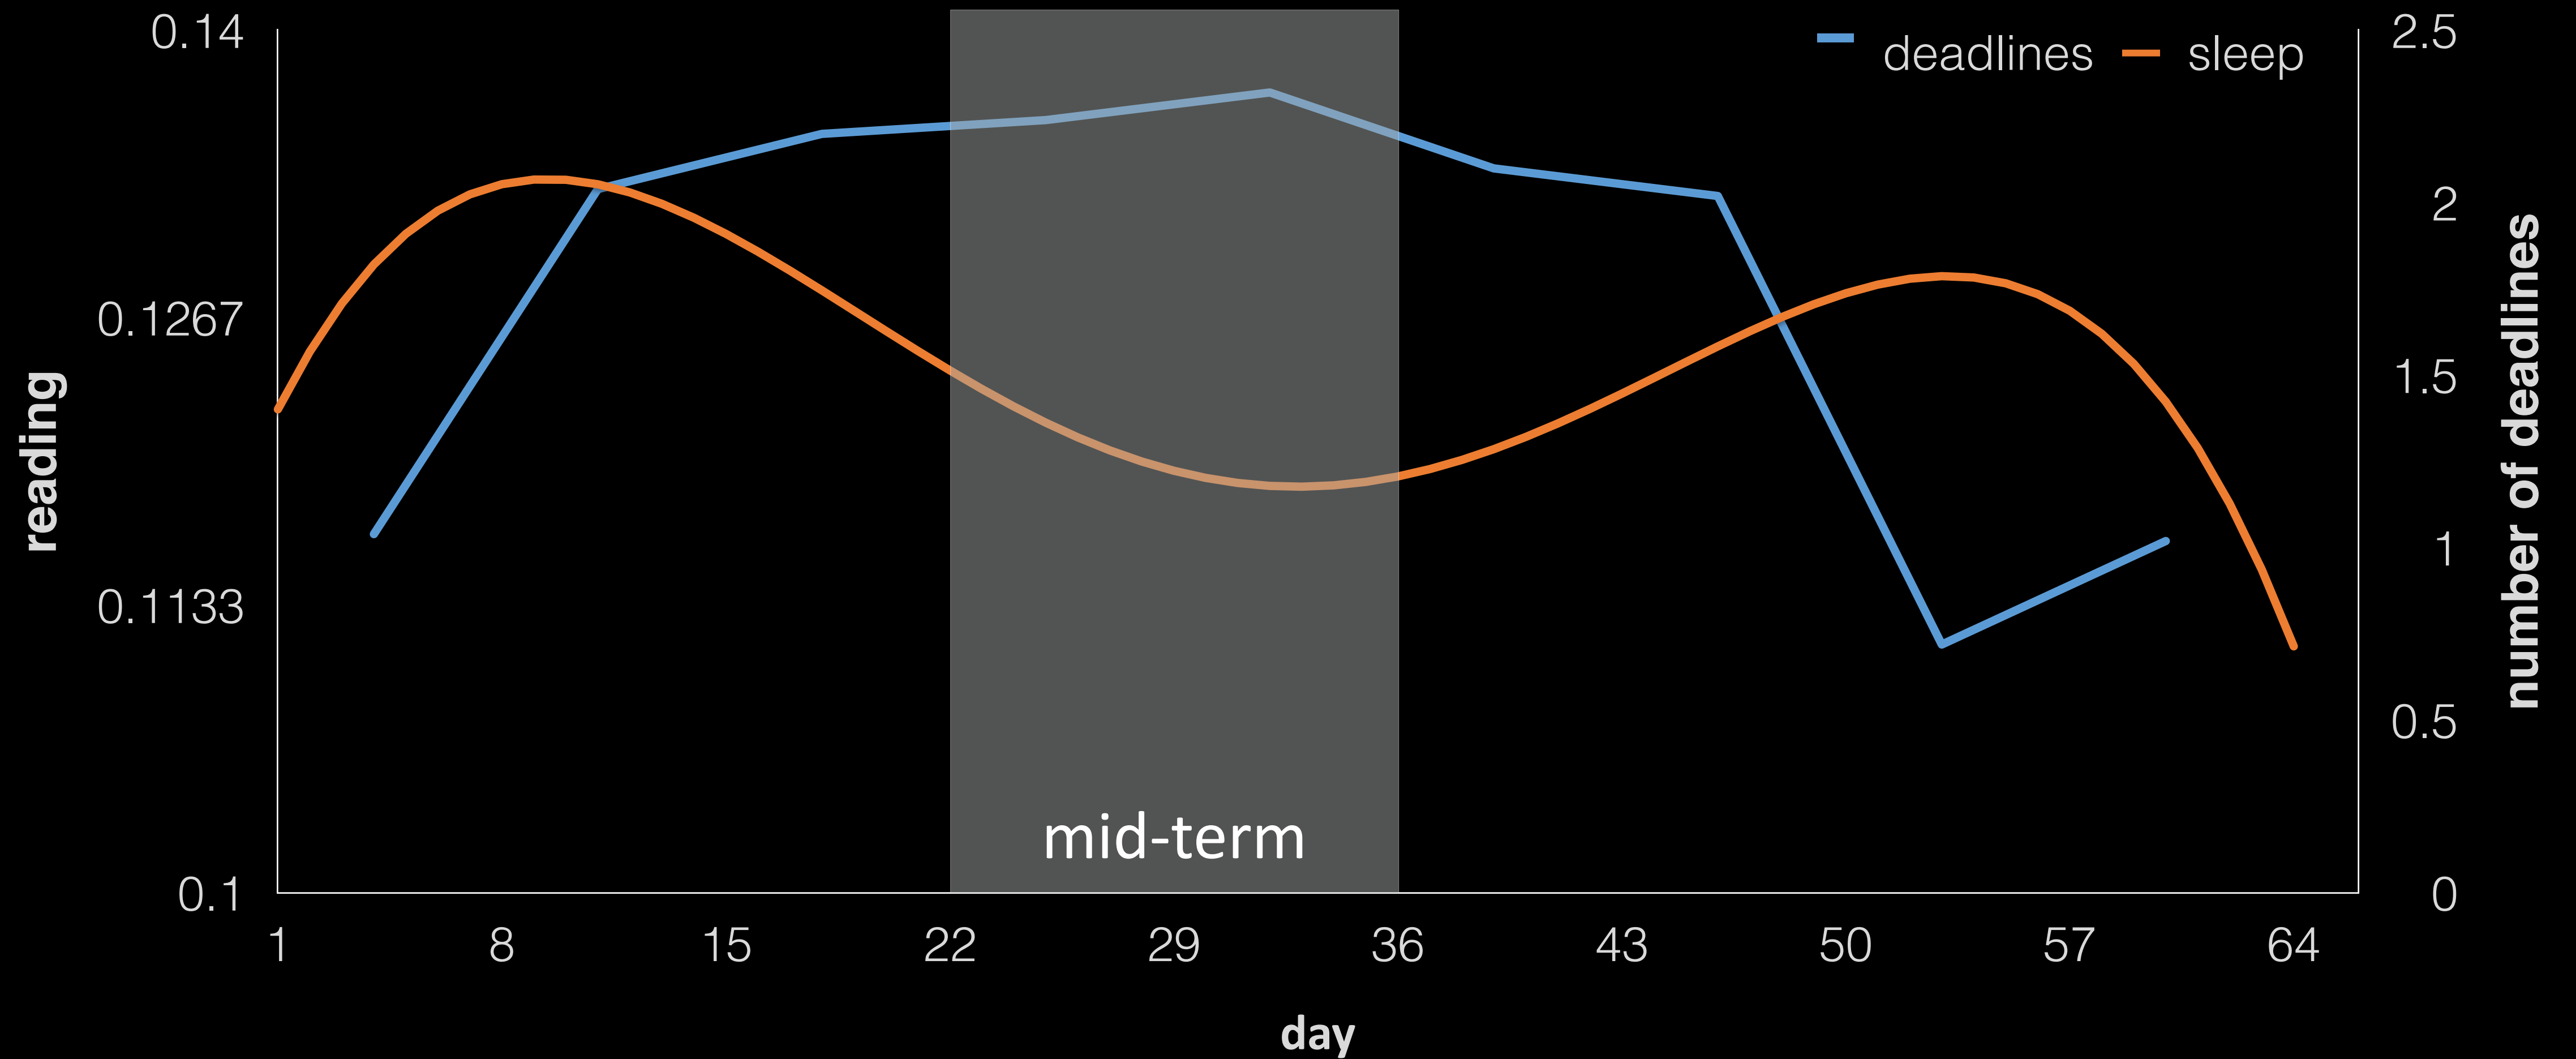

spring GPA

behavioral trends

sleep

conversation

activity duration

time spent in dorms

gym visits

stress and affect

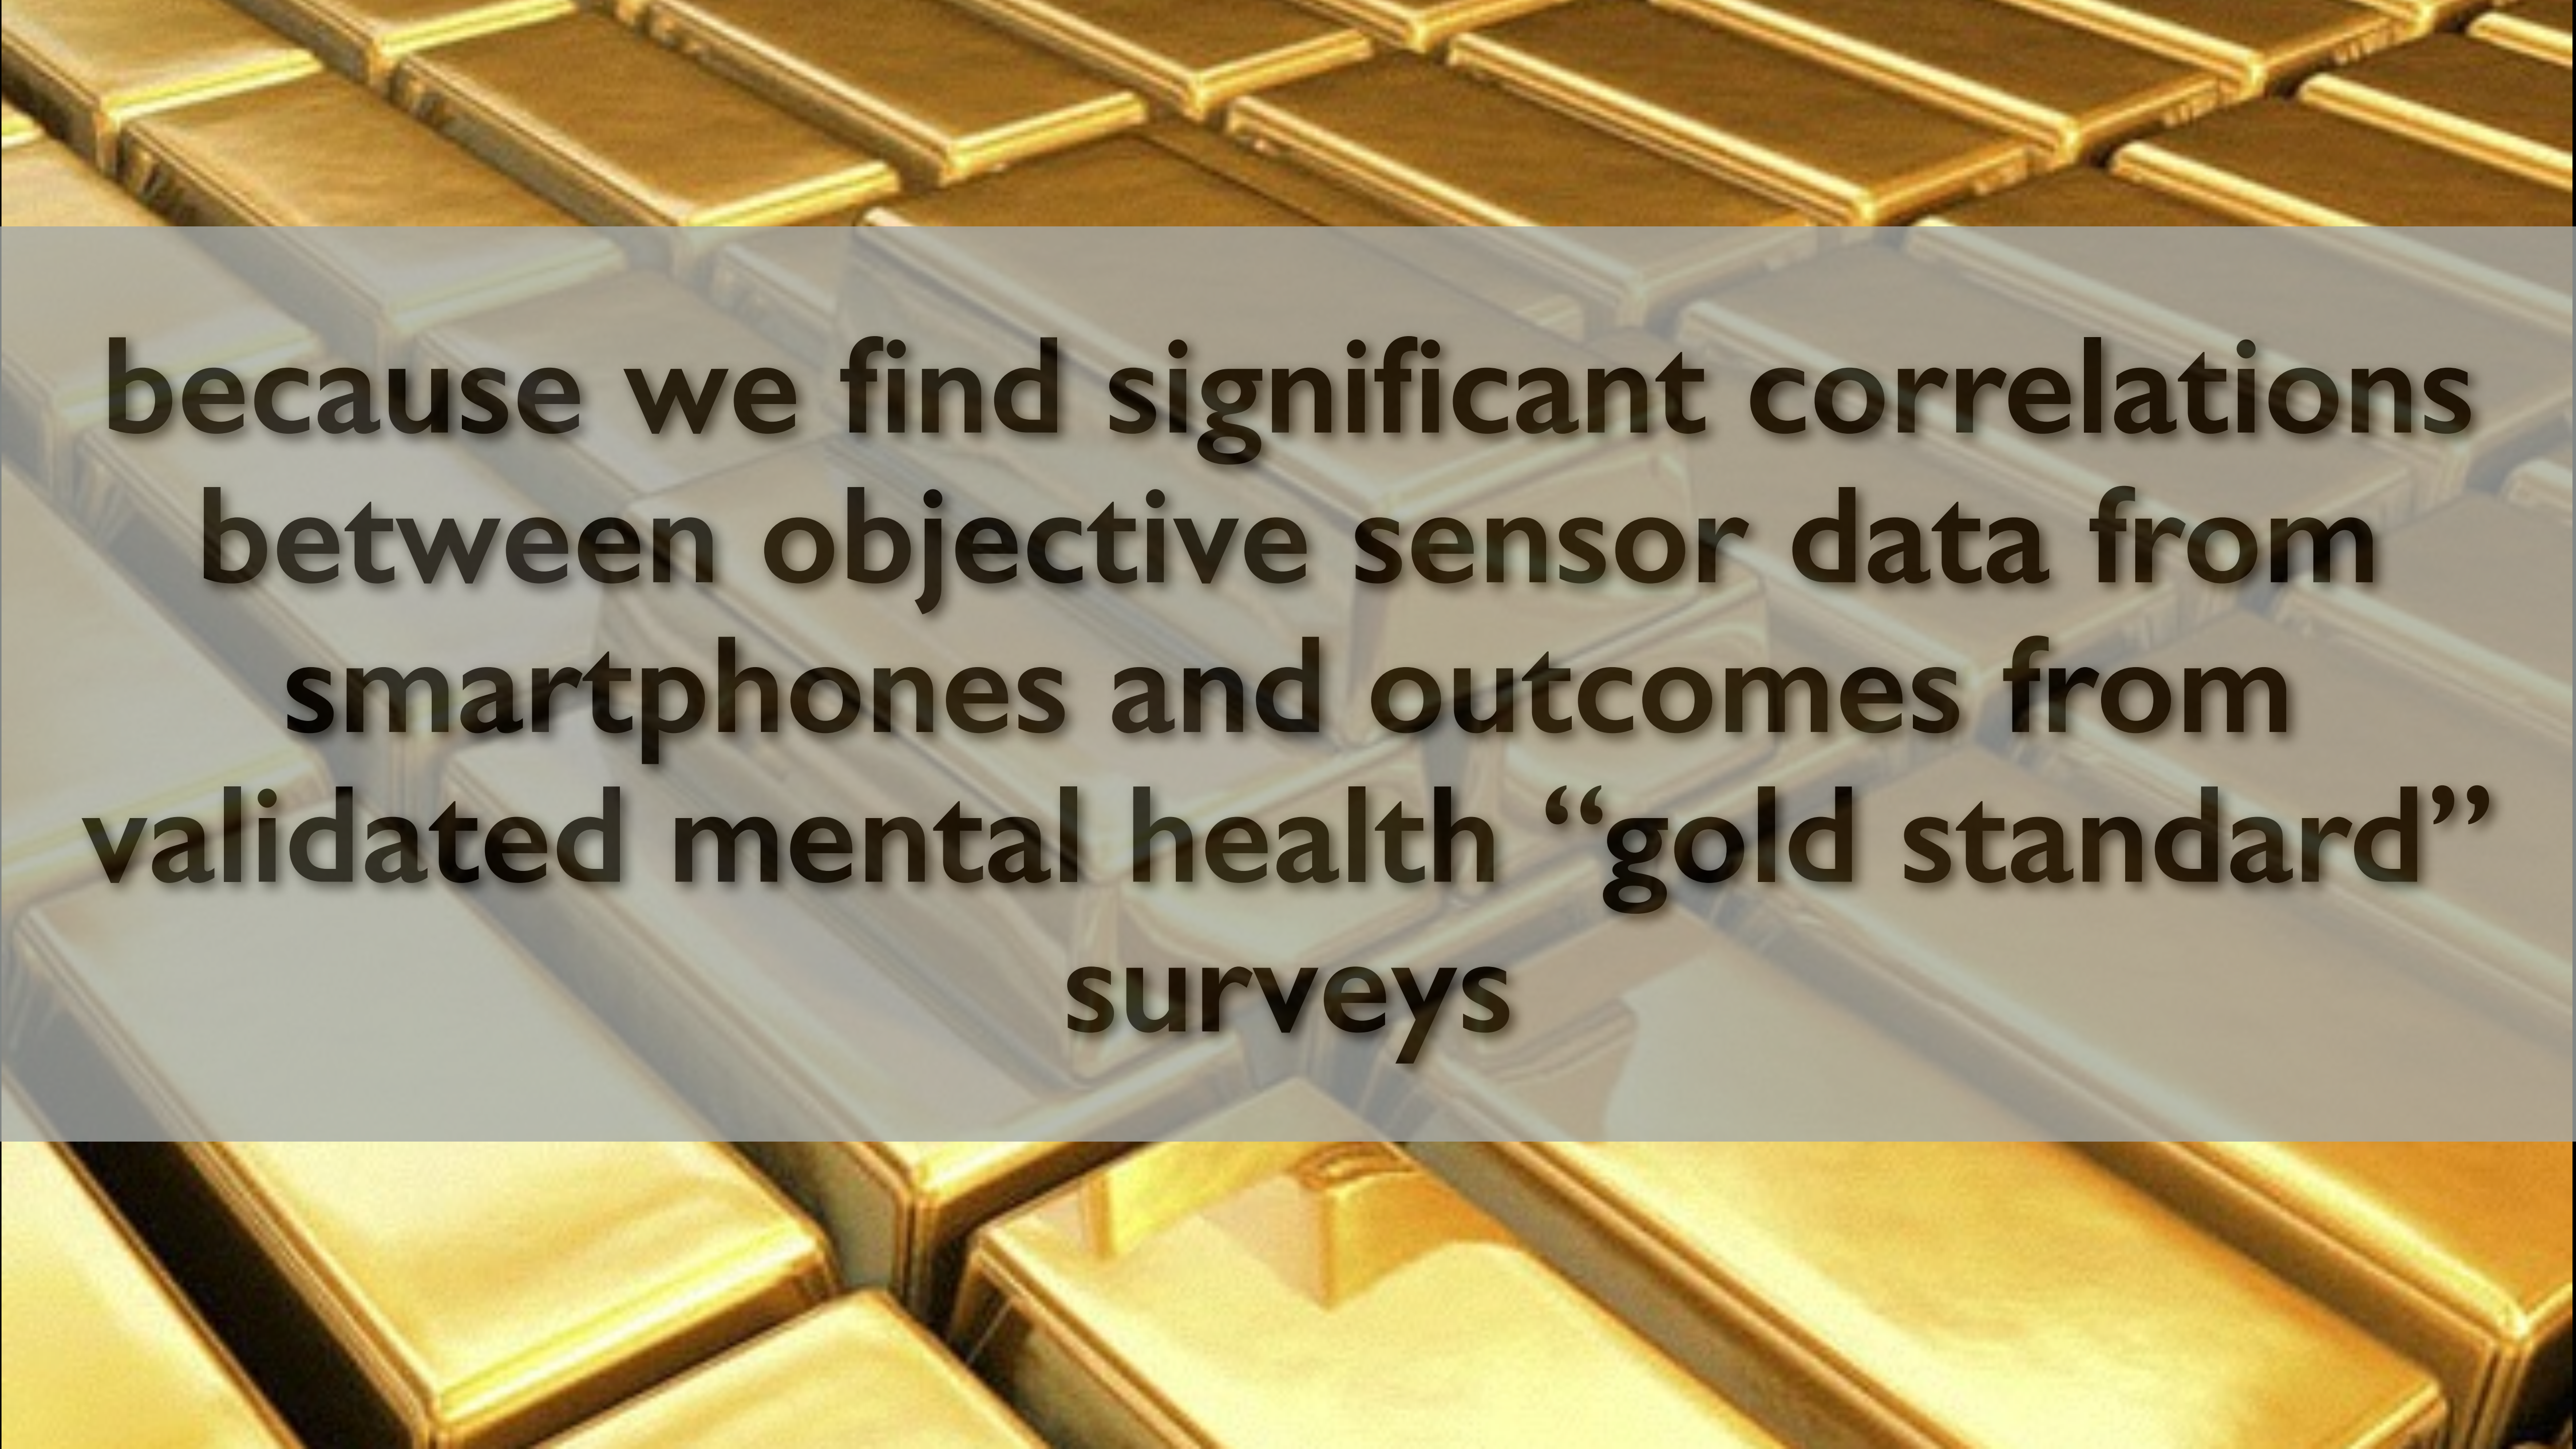

class attendance

finally.

why are these results
important?

**because we find significant correlations
between objective sensor data from
smartphones and outcomes from
validated mental health “gold standard”
surveys**

back to the stakeholders

studentlife.cs.dartmouth.edu

StudentLife

StudentLife is the first study that uses passive and automatic sensing data from the phones of a class of 48 Dartmouth students over a four-year term to assess their mental health (e.g., depression, loneliness, stress), academic performance (grades across all the classes and cumulative GPA) and behavioral trends (e.g., how stress, sleep, visits to the gym, etc. change in response to college life).
